Summary

Software developer at Infraero (Brazilian Airport Infrastructure Company), building and maintaining C#/.NET and SQL Server systems used by hundreds of employees and a production Flutter mobile app with offline-first sync. Full-stack experience with REST APIs, microservices, Angular, React, Node.js, Docker and Git, and integration of AI APIs (OpenAI, Gemini). Comfortable owning features end to end, from requirements and data modeling to delivery. Software Engineering student at the Catholic University of Brasília (expected 2028).

Technical Skills

- **Back-end:** C#, .NET 9, .NET Framework, ASP.NET, Entity Framework Core, REST APIs, Microservices, Node.js
- **Front-end:** JavaScript, TypeScript, HTML, CSS, Angular, React, Tailwind CSS
- **Databases:** SQL Server, PostgreSQL, SQL, relational modeling
- **DevOps & tools:** Docker, Docker Compose, Git, GitHub, Azure DevOps, Postman, OpenAPI
- **Mobile:** Flutter, Dart, Swift, SwiftUI
- **Languages:** Portuguese (native), English (technical reading)

Professional Experience

Software Developer — Infraero · Brasília, Brazil · Apr 2026 – Present

- Delivered end to end the Professional Profile module of ORDEM (C#, .NET Framework 4.8, SQL Server), an internal work-order system for outsourced contracts planned for rollout to federal ministries, owning requirements, data modeling and back-end.
- Ensured full traceability of changes to profiles and contracts by designing SQL Server unique indexes, audit fields (user and timestamp via HttpContext), versioning of annual price adjustments and a status workflow.
- Kept the DEMANDAS system (C#) stable and available for hundreds of employees at the Brasília headquarters and Santos Dumont Airport through preventive and corrective maintenance.
- Digitized about 30 of 90+ airport inspection forms, eliminating paper in those processes, by building the VIA app in Flutter/Dart with automatic charts and event timelines.
- Enabled inspections in areas without connectivity by implementing an offline-first architecture with local persistence and background sync to PostgreSQL.
- Took VIA from a mock API to production with PostgreSQL integration, authentication flows and unit tests (Flutter Test) on critical flows.

Projects

Billing & Inventory ERP · C#, .NET 9, Angular 19, SQL Server, Docker · 2026

- Prevented inconsistent stock updates under concurrent requests by implementing optimistic concurrency with RowVersion.
- Made the whole system run with a single command by containerizing 2 .NET microservices, the Angular front end and 2 SQL Server databases with Docker Compose.
- Automated the invoicing cycle (balance validation, stock write-off, automatic reversal on cancellation, PDF invoice preview) in REST services documented with OpenAPI.

Resumo-IA · Node.js, Express, React, OpenAI and Gemini APIs · 2025

- Automated text summarization by integrating the OpenAI and Gemini APIs into a Node.js REST back end with a React front end.

iOS Crypto Wallet · Swift, SwiftUI, CoreNFC · Apple Developer Academy program · 2025

- Added a physical second factor to transactions using RFID card reading via CoreNFC, in a team-built TRC20 wallet.

Education

B.Sc. in Software Engineering — Catholic University of Brasília (UCB) · Expected 2028

Certifications

- Cloud Services with Swift and Cognitive Services — HackaTruck / Apple Developer Academy · 100h · 2025
- Agile Methods; Challenge Based Learning — TIC em Trilhas (UCB / Softex / Brazilian Ministry of Science and Technology) · 30h each · 2026
- GitHub Certification Track — DIO · 10h · 2026
